

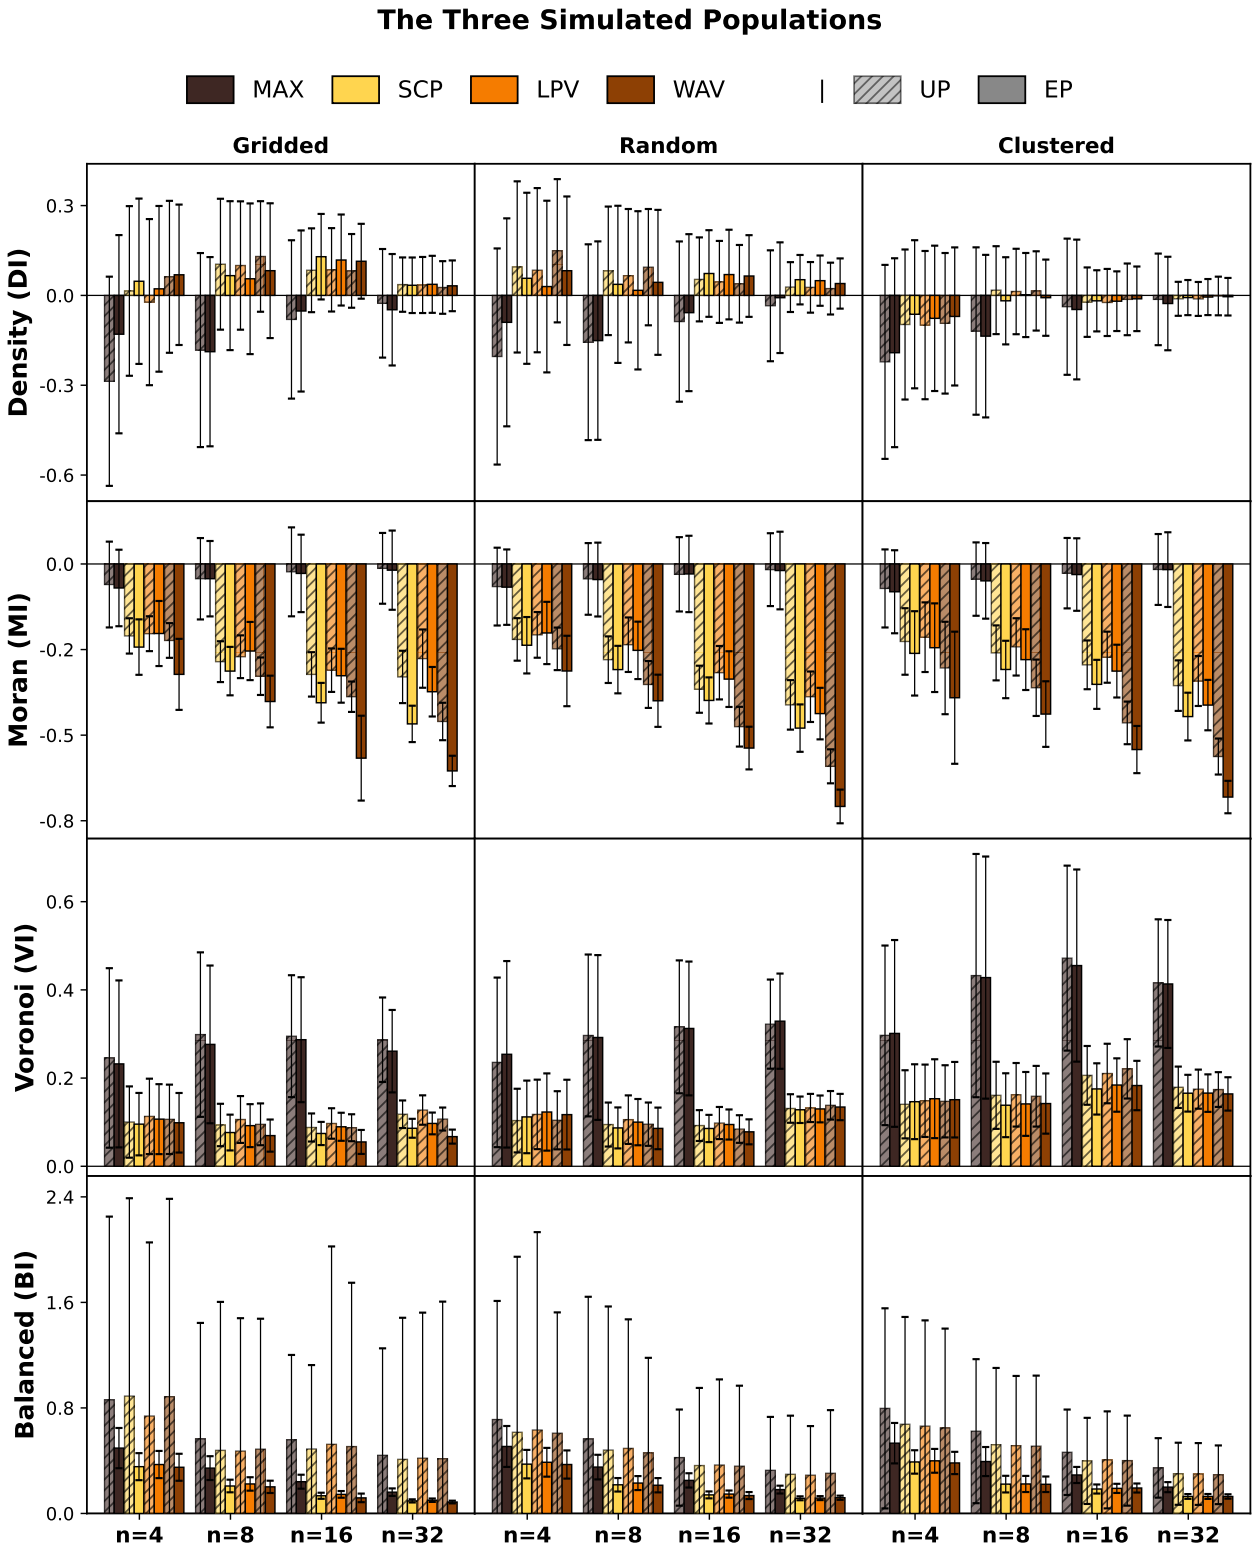

Fig 6: Monte Carlo results for the three simulated populations (Clustered, Random, and Gridded). Bars represent the Monte Carlo means of the indices, and vertical error bars indicate their standard deviations. Solid bars correspond to equal inclusion probabilities (EP), while hatched bars represent unequal probabilities (UP). Results are shown for sample sizes $n = 4, 8, 16, 32$ across the MAX, SCP, LPV, and WAV sampling designs.
