Uniform sample translation on a fixed population
12 × 12 grid • N = 144, n = 8, π_ℓ = 1/18 • shift δ = (1, 1)
(a) Original sample
DI = 0.1984630154
(b) Shifted sample; IPnM fitted again
DI = 0.1984630154
Grid y
Grid x
Population unit (cluster color)
Selected sample unit
Medoid
Squared-distance matching
DI difference = +0.0000000000 | Changed memberships = 0 / 144
Colors aligned by maximum partition overlap. Red arrows show the common sample shift.
Each hard cluster contains 18 population units; medoids and density calculations were recomputed.
